

Price-performance ratio still more attractive!

POSEIDON EDITION Generation II enters the race with a facelift and new attractive prices.

The successful POSEIDON EDITION of the year 2008 will shortly be extended by some technically and visually updated models in its second generation, and positioned in the market with yet more attractive prices.

The key to the successful sales of the current POSEIDON EDITION was the very competitive price together with a sound basic equipment configuration, being at the same time combined with the reputed reliability and uncompromised breathing air quality according to DIN EN 12021. Quality features required by the customers from a compressor by BAUER!

The majority of the buyers of a BAUER compressor will continue to choose a compressor of the premium product line in order to benefit from the low weight, better ergonomics, comprehensive features and numerous options.

In order to better reach the group of very price and quality conscious customers, we have revised the technical features of the POSEIDON EDITION so that we can offer a complete product range which with considerably reduced prices can still hold its ground without limitation against our competition when directly comparing their performances.

Differences and similarities of POSEIDON EDITION and BAUER Premium products:

| POSEIDON EDITION (TE-/HE-/VE RANGE) | BAUER PREMIUM-PRODUCTS (PROFILINE, MINI-VERTICUS, VERTICUS) |
|--|--|
| Best ratio of price and F.A.D. | Highest quality product on the market |
| Simple, cost-saving design | Sophisticated design refined in every detail |
| Standard BAUER compressor blocks | Standard BAUER compressor blocks |
| Breathing air quality according to DIN EN 12021 | Breathing air quality according to DIN EN 12021 Filter systems with increased life time |
| On the horizontal product ranges TE/HE: Robust, heavy steel frame | On the horizontal product ranges (PROFI-LINE): Protective railing with ergonomic hand grips High-quality, weight-optimised material mix with aluminium |

| POSEIDON EDITION (TE-/HE-/VE RANGE) | BAUER PREMIUM-PRODUCTS (PROFILINE, MINI-VERTICUS, VERTICUS) |
|--|--|
| On the mobile TE line: Functional and well-priced: Motor fixed on the base plate | On the mobile PROFI-LINE: Convenient and low-vibration: Motor mounted on vibration-decoupled pivoting motor base for easy maintenance and automatic V-belt tensioning |
| Competitive basic equipment and limited optional features, e.g. standard compressor control, automatic condensate drain, final pressure switch | Comprehensive basic equipment with several filling devices and innumerable optional features such as electronic compressor control B-CONTROL (VERTICUS range), trolley (Profi-Line) and possibility of numerous special voltages |
| Electrical drive | Electrical, diesel, gas drive |
| Connection cable and motor protection switch are to be ordered by the customer if required or provided and installed by himself | Completely ready for connection with motor protection switch and connection cable |

TE-Range

HE-Range

VE-Range

The trademark of the new POSEIDON EDITION is its solid basic equipment with functional and robust construction. This allows customers who desire to buy BAUER quality, but who only have a limited budget available, to decide in favour of plants offering BAUER technology and a sensational price-performance ratio.

The new product range comprises (numbers represent the F.A.D. l/min):

The mobile product range PE 200 / 250 / 300 TE

The stationary compact product range PE 250 / 300 HE

The stationary vertical line PE 320, 500, 680 VE

In order to visually clearly distinguish these two product lines, which aim at different customer groups, the housing of the POSEIDON EDITION is painted yellow. The plants of the POSEIDON EDITION carry the new POSEIDON-EDITION logo. The new product range is promoted in separate POSEIDON EDITION catalogues the colour of which is similar to the housing colour.

The BAUER logo and the BAUER blue remain reserved for the BAUER Premium products.
