

## **WHAT OTHER DIVE EQUIPMENT DO I NEED TO GO DIVING**

### **SIGNAL BUOY**

One of the above two signal buoys are used by divers – they tie them on their body with the rope provided and the buoy moves while the diver swims. The reason the signal buoy is used by diver is to show at the surface of the sea that there is a diver underneath and offer him protection from speed boats or other moving objects(powerboats, vessels etc)

This is the buoy that is tied on the rope at the point where the divers should do a decompression stop. The decompression stop is the stop that the diver makes during the dive so that nitrogen will be released from his blood. .

## **TORCH**

Torches are usually divided into:

- (1) LED
- (2) Normal Bulbs

The LED torches take alkaline batteries.

The conventional torches with normal bulbs are divided into: (1) Torches with alkaline batteries, and (2) Torches with rechargeable batteries.

## **KNIFE**

There are various types of dive knives, most of which are made of stainless steel and other of titanium which are more expensive.

Some knives can be attached to the lifejackets for easy accessibility by the divers, in case of emergency.

## **GLOVES**

There is a distinction between Men's and Women's gloves simply due to design.

Another important differentiation of the gloves is according to :

- The thickness
- The material.
- The shape

## OTHER ACCESSORIES

**Dive Alert** –type of horn used on the surface of the water;  
Connects to direct system of the lifejacket

**Subduck Standard** - Type of underwater alarm – Connects to  
direct system of the lifejacket

**Noisemaker** - Manual type of noise trigger to attract  
attention of other divers. You hang it from one of the  
various D-Rings on the lifejacket

**Survivor Reel:** Reel with 100m rope for wreck diving. It is used to  
unwind the thread when you enter a shipwreck by fixing the tip  
somewhere at the entrance of the shipwreck so that you can go back  
following the thread so that you do not get lost, especially when the  
visibility is not good.
